Geometry vocabulary puzzle worksheet

Find hundreds of free geometry crossword puzzles here, or make your own crossword puzzle engineering! Crossword engineering helps students understand and remember important engineering terms. It can also turn into geometry crossword exercises puzzles for a different way of solving math problems. Browse and print engineering crossword puzzles below. You can also browse word search geometry or make your own word search geometry, crossword, fill blank, word scramble, match, bingo, handwriting practice, open response worksheet, or flashcards. Disclaimer: Each engineering printing activity was performed by Hobbyist crossword users. It has not been reviewed in terms of its relevance or accuracy. We strongly suggest you check the engineering puzzle that meets your criteria before using it in a class. All Hobbyist crossword users who want to keep their puzzles can add a password to their puzzles on the puzzle screen, while logging in. Each puzzle created using crosswords is the only property of the puzzle author, and Happy Crossword does not make any money from the work of users. Keywords used to find the puzzles above: Search for geometric words can be used to get students comfortable with new and unfamiliar terms. After spending some time searching for terms such as identical and integrated angles, quadriplegic, and radian, students will be afraid of these terms and more confident of using them in class. Browse and print the word search geometry below. You can also browse geometry crossword or make your own word search geometry, crossword, blank filling, scrambling word, matching, bingo, handwriting practice, open response worksheet, or flashcards. Disclaimer: Each engineering printing activity was performed by my word search users. It has not been reviewed in terms of its relevance or accuracy. We strongly suggest you check that the engineering puzzle meets your criteria before using it in a class. All my word search users who want to keep their puzzles can add a password to the puzzles on the puzzle screen, while logging in. Every puzzle created using my word search is the only property of the author of the puzzle, and my word search doesn't make any money from the work of users. Keywords used to find the puzzles above: This product is a crossword puzzle involving 18 terms that are in line with geometry. The words are... Octagon, parallelogram, hexagonal, oblique, quadruple, ray, sharp, isosceles, rhombus, obtuse, part line, box, pentagon, rectangle, right, line, Scalene, and EquilateralThis is a large resourPage 2 closed plane number formed by three or more sides respectively that are line segments. Polygon A polygon with three polygons and three angles. A polygonal triangle with four polygonal sands and four angles. Quadriplegic A ribbed with five ribs and five corners. Pentagon ribbed with six sides Six x-angle a polygon with seven sides and seven angles. Ribbed heptagon with eight sides and eight angles. Octagonal ribbed with nine sides and nine corners. Nonagon A polygon with ten ribs and ten angles. Decagon angle that measures greater than 0 degrees and below 90 degrees. Sharp angle that forms a square angle and has a scale of 90 degrees. There is an angle measuring 180 degrees in a row angle that measures greater than 90 degrees and below 180 degrees. obtuse a precise position in space. Straight track point of points in the plane that remains endless in all directions with no end points. Part of a line that includes two points called endpoints and all the points between them. The line section is part of a line; The point beam at either end of the line section from the starting point of the beam. Endpoint lines are at the same level that never intersects and always the same distance from each other. Parallel two lines intersect to form four corners of a vertical line that crosses each other at exactly one point. Intersection of the number of square units required to cover the surface. The space is the distance around the shape. Ocean A is parallel to four equal, or identical, and four right angles. Parallel sides with two equal, or identical opposite opposite sides, and with four right angles. A parallel rectangle with four equal, or identical sides. A quadriplegic with a single pair of parallel semi-quadruple sides is assigned with parallel sides whose opposite sides are parallel, equal, or identical. Parallel sides have exactly the same size and shape. Two identical page lines don't intersect. They are side by side and have the same distance constantly between them. Parallel A straight line passes through the center of a circle. It connects two points on the circumference of the circle. The diameter of an angle equals 90 degrees. They are usually represented by a small square on top of the corner. The right of a flat surface extends forever and does not end. Contains x and y axis, infinite points and lines. Aircraft A shift that conveys the image of a certain distance. It slides the image inside the plane without rotating or flipping it. Translation of a triangle with two equal-length faces. The opposite angles of equal sides are also equal isosceles a pair of contiguous angles formed by intersecting lines. Another word for complementary angles, meaning it adds up to 180 degrees. Two pairs of lines intersect the relationship between the two lines that converge at a right angle. Vertical is a 2-dimensional shape that has three sides and three angles. There are three types of ___ equilateral, isosceles, and Scalene. Triangle of two angles that adds up to 90 degrees. Angles up to 180 degrees are complementary angles, while the angles up to 90 degrees are ___ ocean or distance around the edge of the circle. The equation for creating ___ the circumference of a straight path extends in opposite directions without end, and has no thickness. A ___ part of a line consists of two terminal points. This form is at two connected points. Part of a line consists of a single end point. When you label ___ a three-dimensional point beam, line, or shape. It is an area where there are objects. Space distance from the center to the circumference of a circle. It's the radius of the circle. The radius of a conversion that converts an image around a particular point. It can be transformed by turning it clockwise or counterclockwise. Rotation altogether, the rotation altogether. One ___ measure the angle of 1/360th of the circle. The common endpoint score for two or more rays or two sections of lines. It's the angle or point at which the lines meet. The peak of a triangular function used in the right-hand corner triangle is the length of the adjacent side divided along the chord. Pocket Engineering Vocabulary Crossword Puzzle Crossword Puzzle Puzzle for Printing This Crossword Puzzle Crossword Architecture is for printing. Teachers, students and parents can print them and make copies of them for educational purposes. This crossword puzzle engineering comes with an answer page for printing.
